Raising Healthy Kids David Steinman, 2024-06-04 A must-have book for every parent, from the author of the groundbreaking bestseller *Diet for a Poisoned Planet*. Every parent wonders: Am I buying products for my child that are filled with chemical toxins? In his powerful new book, *Raising Healthy Children*, David Steinman, the director of the Chemical Toxin Working Group and one of America's premier environmental activists, shows how today's most popular items—from bubble bath to cereal to cleaning products to snack foods—are contaminated with unacceptable levels of chemical toxins and pesticides, and he proposes alternatives and substitutes to keep your family safe. Steinman reveals never-before-seen test results for major brands like Johnsons & Johnsons, Kellogg, Tide, and Clairol, and General Mills that identify exactly which products contain dangerous ingredients. He casts a wide net, showing how beauty products as well as food items can cause reproductive health issues in pregnant women, and that environmental exposures, particularly in schools, can have a profound impact on babies' and children's development. Drawing on current research, illuminating vignettes, and inspiring stories of activism, Steinman provides action steps for parents in every chapter, giving them the tools they need to shop for everyday products that will be toxin-free and helping them ask the right questions about their local schools and workplaces to determine their potential levels of exposure. As he writes, "The goal of this book is to show you how to keep you and your family safe and healthy." When Steinman published his acclaimed bestseller *Diet for a Poisoned Planet*, it was compared to Rachel Carson's classic *Silent Spring* for bringing to light the chemical toxins in our food. Now, more than thirty years later, Steinman brings readers up to date on the increased dangers we face in all aspects of our lives and teaches us how we can

make smart choices to protect our children and ourselves. *Raising Healthy Children* is an inspiring, informative, and user-friendly book that will help every family reduce their toxic exposures and ensure their health and well-being.

A-GPS Frank Stephen Tromp Van Diggelen,2009 Today, increasing demands and expectations are being placed on GPS systems. Assisted GPS (A-GPS) has been developed to provide greatly improved capabilities, helping GPS work better and faster in almost any location. Offering a detailed look at all the technical aspects and underpinnings of A-GPS, this unique book places emphasis on practical implementation. The book reviews standard GPS design, helping you understand why GPS requires assistance in the first place. You discover how A-GPS enables the computing of a position from navigation satellites in the absence of precise time - a topic not covered in any other book. Moreover, you learn how to design and analyze a high sensitivity GPS receiver and determine the achievable sensitivity of a GPS receiver. The book provides detailed worksheets that show how to compute, analyze, and improve the processing gain from the signal strength at the antenna to the carrier-to-noise ratio (C/N0) at the front end, to the signal-to-noise ratio (SNR) after the correlators. This cutting-edge volume discusses special forms of assistance data, industry standards for A-GPS, and government mandates for location of mobile phones. You also find coverage of future global navigation satellite systems and how they can be designed specifically for instant-fixes and high sensitivity. The book features numerous tables, worksheets, and graphs that illustrate key topics and provide the equivalent of a technical handbook for engineers who design or use A-GPS.

Mobile Computing Tomasz Imielinski, Henry F. Korth, 2007-08-26 The rapid development of wireless digital communication technology has created capabilities that software systems are only beginning to exploit. The falling cost of both communication and of mobile computing devices (laptop computers, hand-held computers, etc.) is making wireless computing affordable not only to business users but also to consumers. Mobile computing is not a scaled-down version of the established and well-studied field of distributed computing. The nature of wireless communication media and the mobility of computers combine to create fundamentally new problems in networking, operating systems, and information systems. Furthermore, many of the applications envisioned for mobile computing place novel demands on software systems. Although mobile computing is still in its infancy, some basic concepts have been identified and several seminal experimental systems developed. This book includes a set of contributed papers that describe these concepts and systems. Other papers describe applications that are currently being deployed and tested. The first chapter offers an introduction to the field of mobile computing, a survey of technical issues, and a summary of the papers that comprise subsequent chapters. We have chosen to reprint several key papers that appeared previously in conference proceedings. Many of the papers in this book are being published here for the first time. Of these new papers, some are expanded versions of papers first presented at the NSF-sponsored Mobidata Workshop on Mobile and Wireless Information Systems, held at Rutgers University on Oct 31 and Nov 1, 1994.

Cellular Convergence and the Death of Privacy Professor Stephen B. Wicker, 2013-08-21 Cellular technology has always been a surveillance technology, but cellular convergence - the growing trend for all forms of communication to consolidate onto the cellular handset - has dramatically increased the impact of that surveillance. In *Cellular Convergence and the Death of Privacy*, Stephen Wicker explores this unprecedented threat to privacy from three distinct but overlapping perspectives: the technical, the legal, and the social. Professor Wicker first describes cellular technology and cellular surveillance using language accessible to non-specialists. He then examines current legislation and Supreme Court jurisprudence that form the framework for discussions about rights in the context of cellular surveillance. Lastly, he addresses the social impact of surveillance on individual users. The story he tells is one of a technology that is changing the face of politics and economics, but in ways that remain highly uncertain.

Semantic Modeling and Enrichment of Mobile and WiFi Network Data Abdalbaki Uzun, 2018-07-20 This book discusses the fusion of mobile and WiFi network data with semantic technologies and diverse context sources for offering semantically enriched context-aware services in the telecommunications domain. It presents the OpenMobileNetwork as a platform for providing estimated and semantically enriched mobile and WiFi network topology data using the principles of Linked Data. This platform is based on the OpenMobileNetwork Ontology consisting of a set of network context ontology facets that describe mobile network cells as well as WiFi access points from a topological perspective and geographically relate their coverage areas to other context sources. The book also introduces Linked Crowdsourced Data and its corresponding Context Data Cloud Ontology, which is a crowdsourced dataset combining static location data with dynamic context information. Linked Crowdsourced Data supports the OpenMobileNetwork by providing the necessary context data richness for more sophisticated semantically enriched context-aware services. Various application scenarios and proof of concept services as well as two separate evaluations are part of the book. As the usability of the provided services closely

depends on the quality of the approximated network topologies, it compares the estimated positions for mobile network cells within the OpenMobileNetwork to a small set of real-world cell positions. The results prove that context-aware services based on the OpenMobileNetwork rely on a solid and accurate network topology dataset. The book also evaluates the performance of the exemplary Semantic Tracking as well as Semantic Geocoding services, verifying the applicability and added value of semantically enriched mobile and WiFi network data.
